Mitsubishi's 4G63t engine is
among the most powerful
engines ever in the sport-
compact world. It's not
uncommon to find one of

these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has

been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine

management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

Although the Assyrian kingdom that dominated the Ancient Near East between the ninth and seventh centuries BC had a rich material culture, attested particularly by the distinctive stone wall reliefs and colossal gateway figures, practically nothing is known about Assyrian metalwork. There has been no previous survey of this

subject, largely because most of the material was not accessible. This volume makes available for the first time a vast amount of previously unpublished metalwork, much of it from the Assyrian capital city of Nimrud, excavated first by Sir Henry Layard between 1845 and 1851 and then by the British School of Archaeology in Iraq between 1949 and 1963. It emerges that Assyria had a thriving metalworking industry probably superior to any contemporary state in the region, and was producing large quantities of sophisticated bronze and ironwork, of high technical

quality and sometimes elaborately decorated. This book will therefore be of interest to archaeologists, art historians and metallurgists. It is the publication of a PhD thesis that was successfully submitted in 1979. It is published here in its original form in order to make the large amount of primary data that it contains available to a wider circle of scholars.
