The majority of maintenance manuals are customised for a specific fleet, i.e. specific to a particular airline. That way Boeing only provides information that is applicable to those aircraft and even with a given manual you need to be able to filter on applicability to ensure that specific maintenance information is applicable to a specific aircraft.

Proceedings of the First Symposium on Aviation Maintenance and Management collects selected papers from the conference of ISAMM 2013 in China held in Xi ' an on November 25-28, 2013. The book presents state-of-the-art studies on the aviation maintenance, test, fault diagnosis, and prognosis for the aircraft electronic and electrical systems. The selected works can help promote the development of the maintenance and test technology for the aircraft complex systems. Researchers and engineers in the fields of electrical engineering and aerospace engineering can benefit from the book. Jinsong Wang is a professor at School of Mechanical and Electronic Engineering of Northwestern Polytechnical University, China.

A just culture is a culture of trust, learning and accountability. It is particularly important when an incident has occurred; when something has gone wrong. How do you respond to the people involved? What do you do to minimize the negative impact, and maximize learning? This third edition of Sidney Dekker 's extremely successful Just Culture offers new material on restorative justice and ideas about why your people may be breaking rules. Supported by extensive case material, you will learn about safety reporting and honest disclosure, about retributive just culture and about the criminalization of human error. Some suspect a just culture means letting people off the hook. Yet they believe they need to remain able to hold people accountable for undesirable performance. In this new edition, Dekker asks you to look at 'accountability' in different ways. One is by asking which rule was broken, who did it, whether that behavior crossed some line, and what the appropriate consequences should be. In this retributive sense, an 'account' is something you get people to pay, or settle. But who will draw that line? And is the process fair? Another way to approach accountability after an incident is to ask who was hurt. To ask what their needs are. And to explore whose obligation it is to meet those needs. People involved in causing the incident may well want to participate in meeting those needs. In this restorative sense, an 'account' is something you get people to tell, and others to listen to. Learn to look at accountability in different ways and your impact on restoring trust, learning and a sense of humanity in your organization could be enormous.

All the information you need to operate safely in U.S. airspace.
