gebraic topology into a one quarter course, but we were overruled by the analysts and algebraists, who felt that it was unacceptable for graduate students to obtain their PhDs without having some contact with algebraic topology. This raises a conundrum. A large number of students at Chicago go into topol-ogy, algebraic and geometric.

In algebraic terms, this would correspond to a quotient space (really, a quotient group, which we covered in our first primer on groups) of the k -cycles by the k -boundaries. That is, a cycle would be considered a “trivial hole” if it is a boundary, and two “different” cycles would be considered the same hole if their difference is a k -boundary.
