Using State Records - Oracle  
State records are used in Application Engine programs to keep track of useful information through the life of a program. PeopleSoft uses the concept of a record (table) to store this information. The scope of data in a state record is global to an application engine program (and other programs that share the state record). The naming convention of state records is to end with the suffix \_AET. They can either be a derived/work record or a SQL table.
