Names control access to the EOS and all switch commands. The switch is typically accessed through an SSH login, using a previously defined username-password combination. To create a new username or modify an existing username, use the username command. Valid usernames begin with A-Z, a-z, or 0-9 and may also contain any of these characters:

Changes to: 7280QR-C72 Port Layout \*\* NOTE: Breakout mode(4x10G) requires EOS 4.21.3F or later for ports 11,13,15,17,19,21,23,25, 47,49,51,53,55,57,59,61. \*\* NOTE: When running EOS 4.21.2F or older, these ports can only run at 1x40GbE or 1x100GbE. 2x50G and 4x25G breakout modes are not supported at this time on any EOS release.

~~Arista EOS Central - Tag - 4.21.3F~~

Arista EOS supports two modes of hashing algorithms to encrypt passwords: MD5 and SHA512. By default, Arista EOS encrypts all the passwords configured in the system using the MD5 algorithm. It is commonly accepted that SHA512 provides a higher level of security to stored passwords and it is recommended to use it whenever is possible.

Arista still does keepalives between peers. MLAG Documentation for the peer-link statement states that you don't have to use the same link. An MLAG is formed by connecting two switches through an interface called a peer link. The peer link carries MLAG advertisements, keepalive messages, and data traffic between the switches. This information ...
