Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

In this book, Sanjoy Mahajan shows us that the way to master complexity is through insight rather than precision. Precision can overwhelm us with information, whereas insight connects seemingly disparate pieces of information into a simple picture. Unlike computers, humans depend on insight. Based on the author's fifteen years of teaching at MIT, Cambridge University, and Olin College, The Art of Insight in Science and Engineering shows us how to build insight and find understanding, giving readers tools to help them solve any problem in science and engineering.To master complexity, we can organize it or discard it. The Art of Insight in Science and Engineering first teaches the tools for organizing complexity, then distinguishes the two paths for discarding complexity: with and without loss of information. Questions and problems throughout the text help readers master and apply these groups of tools. Armed with this three-part toolchest, and without complicated mathematics, readers can estimate the flight range of birds and planes and the strength of chemical bonds, understand the physics of pianos and xylophones, and explain why skies are blue and sunsets are red.The Art of Insight in Science and Engineering will appear in print and online under a Creative Commons Noncommercial Share Alike license.

Effective socialization of new student affairs professionals is essential--both for the individual success of these practitioners, and for the work of a college or university that promotes student learning. It enables new professionals to manage the important personal and professional transitions they experience throughout their careers, engage in continuous professional development, and achieve high levels of productivity. It also counteracts the high attrition rate among new hires, with all the attendant costs to the institution in terms of resources spent on recruiting, hiring, training, supervising, and developing staff talent. The socialization process for new professionals includes formal and informal elements that influence both success and quality of work life. This process is far more complex than a single orientation program organized by a unit or division. Rather, it is a comprehensive process where both the new professional and organization learn about and from each other in ways that influence working relationships and individual and organizational outcomes. Part I of this book defines the concept, explains its value, and offers a model of socialization. Part II examines the institutional context in which the socialization of new professionals occurs, and describes how different institutional types influence the socialization process. It considers the changing characteristics of college students, and how these impact the work of student affairs. In addressing the extra-institutional and professional contexts, Part III considers the role that graduate education plays in preparing new professionals for work in student affairs, and offers guidance to faculty and practitioners involved in graduate education about what they can do to introduce graduate students to professional life. It addresses the importance of professional orientation activities, the roles of supervision and mentorship, as well as the impact of peers and institutions on the socialization process. It concludes with a discussion of the role and importance of professional associations. This book is intended for graduate program faculty, for senior student affairs officers concerned about developing and retaining the new staff, and for administrators and leaders in student affairs shaping the future of the profession. For new professionals themselves it offers insights on the path to professionalization.
