~~Color Psychology: Effects of Perceiving Color on —~~

Abstract. Color is a ubiquitous perceptual stimulus that is often considered in terms of aesthetics. Here we review theoretical and empirical work that looks beyond color aesthetics to the link between color and psychological functioning in humans. We begin by setting a historical context for research in this area, particularly highlighting methodological issues that hampered earlier empirical work.

The intensity of illumination also affects colour perception. At very low light levels, blue and green objects appear brighter than red ones compared with their relative brightness in stronger illumination, an effect known as the Purkinje shift for its discoverer, the Czech physiologist Jan Evangelista Purkinje. At higher levels of illumination, there is a related shift in hues, called the Bezold-Brücke effect, such that most colours appear less red or green and more blue or yellow as the ...

But they're also seen as the least shy of any hair color—and in one interesting study, the most successful: when researchers analyzed the hair colors of 500 CEOs, they found that 4% had red hair. This might seem minute, but when you consider the extreme rarity of redheads in the population, it's actually quite a significant percentage.
