The natural environment encompasses all living and non-living things occurring naturally, meaning in this case not artificial. The term is most often applied to the Earth or some parts of Earth. This environment encompasses the interaction of all living species, climate, weather and natural resources that affect human survival and economic activity. The concept of the natural environment can be ...

One major component of environmental degradation is the depletion of the resource of fresh water on Earth. Approximately only 2.5% of all of the water on Earth is fresh water, with the rest being salt water. 69% of fresh water is frozen in ice caps located on Antarctica and Greenland, so only 30% of the 2.5% of fresh water is available for consumption.

The Earth's natural resources include air, water, soil, minerals, fuels, plants, and animals. Conservation is the practice of caring for these resources so all living things can benefit from them now and in the future. All the things we need to survive, such as food, water, air, and shelter, come from natural resources.

Earth's Natural Resources provides a thorough overview of the subject and details how natural resources relate to individuals and our society. It discusses how the Earth's natural resources form and change over time, how they are extracted for human use, and how we can continue to sustainably use them with our ever-growing global population. The text begins with the basics of energy-giving resources such as oil, natural gas, and coal, as well as alternative energy sources and nuclear power. It goes on to cover the earth's abundant and scarce metals, followed by elements used in

agriculture, water and its distribution, quality, and usage. The final section highlights soil composition, minerals, and degradation. In each section, the author discusses the science of the element under consideration, as well as any environmental and sustainability concerns that have arisen as humans have harvested the resources with increasing effectiveness. Key Features of Earth's Natural Resources: -Provides a thorough overview of our natural resources and how society affects these resources -Includes material on alternative energy sources -End-of-chapter material includes chapter summaries, key term listing, student problems, and reference for further reading -Instructor resources include: PowerPoint Image Bank, PowerPoint Lecture Slides, answers to end of chapter problems

What will be the fate of humanity and our store of natural resources in the next century? Will we drown in our own garbage and destroy the diversity of the biosphere? Heinrich Holland and Ulrich Petersen examine these and other questions in an innovative earth, natural resource, and environmental sciences textbook. Moving away from the organization of traditional geology courses, their work is based on an Earth systems science approach covering the interaction of the Earth, Sun, atmosphere, biosphere, and oceans. The first section of the book deals with the workings of the Earth as a complex system, the sources of external and internal energy, and the effects of these energies on near surface and deep Earth environments. The second section deals with the formation, distribution, availability, and cost of renewable and nonrenewable resources, and addresses the adequacy of these resources for humanity during the next century. Finally, the third section deals with the effects of humanity on the environment, especially on the composition of the atmosphere and fresh waters, and on the nature of the biosphere. The book emphasizes the need for a wide range of natural resources as well as for a hospitable environment. It summarizes the state of knowledge regarding the linkage between these often conflicting needs, and defines to what extent policy decisions in the areas of conflict can be made on a sound scientific basis. Presenting a number of one-hundred-year projections, the authors are guardedly optimistic about the ability of the human race to live, but they believe that humanity will be living dangerously during the twenty-first century.
