This important reference volume covers developments in aspects of British library and information work during the five year period 2001-2005. Over forty contributors, all of whom are experts in their subject, provide an overview of their field along with extensive further references which act as a starting point for further research. The book provides a comprehensive record of library and information management during the past five years and will be essential reading for all scholars, library professionals and students.

The U.S. Environmental Protection Agency (EPA) and U.S. Department of Energy (DOE) produce the Fuel Economy Guide to help car buyers choose the most fuel-efficient vehicle that meets their needs. EPA compiles the fuel economy data, and DOE publishes them in print and on the Web.

This important book is the first to offer practical guidance to information management professionals seeking to implement web archiving programmes of their own. It is essential reading for those who need to collect and preserve specific elements of the web - from national domains or individual subject areas to an organization's own website. Drawing on the author's experience of managing the National Archives' web archiving programme, together with lessons learned from other international initiatives, this book provides a comprehensive overview of current best practice. It assumes only a basic understanding of IT and web technologies, but also offers much to more technically-oriented readers. Contents include: the development of web archiving selection policies collection methods quality assurance preservation delivery to user optimizing websites for archiving legislation managing a web archiving programme future trends. Readership: Written to address audiences from the whole spectrum of information management sectors, this book is vital reading for three types of reader: policy-makers, who need to make decisions about establishing or developing an institutional web archiving programme; information management professionals, who may be required to implement a web archiving programme; and website owners and web masters, who may be required to facilitate archiving of their own websites.

When it comes to any current scientific debate, there are more than two sides to every story. Controversies in Science and Technology, Volume 4 analyzes controversial topics in science and technology-infrastructure, ecosystem management, food security, and plastics and health-from multiple points of view. The editors have compiled thought-provoking essays from a variety of experts from academia and beyond, creating a volume that addresses many of the issues surrounding these scientific debates. Part I of the volume discusses infrastructure, and the real meaning behind the term in today's society. Essays address the central issues that motivate current discussion about infrastructure, including writing on the vulnerability to disasters. Part II, titled "Food Policy," will focus on the challenges of feeding an ever-growing world and the costs of not doing so. Part III features essays on chemicals and environmental health, and works to define "safety" as it relates to today's scientific community. The book's final section examines ecosystem management. In the end, Kleinman, Cloud-Hansen, and Handelsman provide a multifaceted volume that will be appropriate for anyone hoping to understand arguments surrounding several of today's most important scientific controversies.
