Cervical screening: professional guidance - GOV.UK

Cervical screening looks for the human papillomavirus (HPV) which can cause abnormal cells on the cervix. If HPV is found a cytology test is used as a triage, to check for any abnormal cells. If no...

Cervical screening: programme overview - GOV.UK

Guidelines have been developed for cervical cancer screening that address the frequency with which women should have Pap smears. The US Preventive Services Task Force (USPSTF) and the American Cancer Society (ACS) both recommend that all women receive cervical cancer screening every 3 years between the ages of 21 and 65.

Pap Smear: Abnormal Results, When to Get One & Guidelines

Those aged 25 to 65 should have a primary HPV test* every 5 years. If primary HPV testing is not available, screening may be done with either a co-test that combines an HPV test with a Papanicolaou (Pap) test every 5 years or a Pap test alone every 3 years. (*A primary HPV test is an HPV test that is done by itself for screening.

The American Cancer Society Guidelines for the Prevention ...

Two screening tests can help prevent cervical cancer or find it early—The Pap test (or Pap smear) looks for precancers, cell changes on the cervix that might become cervical cancer if they are not treated appropriately.; The HPV test looks for the virus (human papillomavirus) that can cause these cell changes. Both tests can be done in a doctor's office or clinic.
