The engine control unit can detect a misfire in various different ways, depending on what car model and engine you have. The engine control module uses a lot of sensors so that it knows when to ignite the spark plug and when to inject the fuel into the cylinder and to optimize the air-fuel mixture. To detect a misfire, the engine control module is often using the crankshaft sensor.

Engine Misfire Symptoms, Causes & Troubleshooting ...
The crankshaft has 3-inch diameter main journals and 2.311-inch rod journals, and is made from cast iron. Casting Material The engine block, intake manifold and cylinder heads are made of cast iron, with the block, manifold and heads contributing to a total average engine weight of 510 lbs.
