OCCUPATIONAL MEDICAL EXAMINATIONS and SURVEILLANCE MANUAL ...

The aim of occupational health surveillance is not only to carry out tests, questionnaires or examinations, but to interpret these results and take action to eliminate or control further risk where necessary. The findings can also provide some reassurance that control measures are effective.

Occupational health surveillance | Fit for Work

Surveillance is a core activity in the practice of occupational health. Two broad groups of surveillance are commonly performed—hazard surveillance and health surveillance. While the focus of the former is hazards at the workplace, the latter type of surveillance pertains to the health of a person or group of workers.

SURVEILLANCE IN OCCUPATIONAL HEALTH | Occupational ...

For periodic health surveillance under COSHH regulation 11, occupational health professionals can administer an appropriate health questionnaire (eg respiratory) remotely. For periodic medical surveillance under COSHH Schedule 6, appointed doctors can conduct a telephone consultation.

Health and medical surveillance during the COVID-19 outbreak

There are also a number of high-hazard substances or agents where the law requires that the health surveillance programme includes statutory medical surveillance. Statutory medical surveillance...

HSE: Is health surveillance required in my workplace?

DODD 6055.05-M CE-03 - OCCUPATIONAL MEDICAL EXAMINATIONS ...

Overview. Medical screening and medical surveillance are two fundamental strategies for optimizing employee health. Although the terms are often used interchangeably, they are quite distinct concepts. Medical screening is, in essence, only one component of a comprehensive medical surveillance program. The fundamental purpose of screening is early diagnosis and treatment of the individual and thus has a clinical focus.

Medical Screening and Surveillance - Overview ...

This booklet aims to introduce the concept of health surveillance to employers and employees and provide practical guidance on medical examinations for workers engaged in certain

Occupational Health Surveillance Testing is carried out by a fully qualified occupational health (OH) nurse We provide lost child point of contact for all your festivals, family fun day and concerts with resources and activities to keep the child entertained.

Health Surveillance Reports – Occupational Health ...

Health surveillance is any activity that involves getting information about an employees' health to help protect them from health risks at work. Some are required by law (health surveillance) and others are carried out as good practice (health checks). Workplace control measures may not always be totally reliable.

What is health surveillance? - Health surveillance ...

Workers' health surveillance should be an essential component of programmes aimed at the protection of workers, and such programmes should be able to provide medical examinations prescribed by legislation. It is a means to implement preventive action, as there are diseases caused by work which have to be identified, treated and compensated.

Read Online Occupational Medical Examinations And Surveillance Manual

This Manual, "Occupational Medical Examinations and Surveillance Manual," is issued in accordance with the authority of DoD Instruction (DoDI) 6055.5 (Reference (a)). It provides health professionals with information and references appropriate for developing and conducting occupational medical examinations and surveillance prescribed in Reference (a) by identifying the known health risks associated with specific jobs, processes, and exposures. DoD 6055.5-M, "Occupational Medical Surveillance Manual," May 4, 1998, (Reference (b)) is hereby canceled. This Manual applies to the Office of the Secretary of Defense, the Military Departments, the Chairman of the Joint Chiefs of Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities in the Department of Defense ("DoD Components"). This Manual is effective immediately and is mandatory for use by all the DoD Components in developing, performing, interpreting the results of, and conducting population-based surveillance with the results of occupational medical examinations. Data collected through environmental sampling and individual surveillance should be entered into appropriate electronic data systems, as available.

How To Create A Medical Surveillance Program, An Example of a Program, this book is to provide a guideline for the Medical Surveillance Program (MSP). It is also intended to help occupational health professionals and others recognize and evaluate health risks associated with specific workplace exposures.

Despite many advances, 20 American workers die each day as a result of occupational injuries. And occupational safety and health (OSH) is becoming even more complex as workers move away from the long-term, fixed-site, employer relationship. This book looks at worker safety in the changing workplace and the challenge of ensuring a supply of top-notch OSH professionals. Recommendations are addressed to federal and state agencies, OSH organizations, educational institutions, employers, unions, and other stakeholders. The committee reviews trends in workforce demographics, the nature of work in the information age, globalization of work, and the revolution in health care delivery-exploring the implications for OSH education and training in the decade ahead. The core professions of OSH (occupational safety, industrial hygiene, and occupational medicine and nursing) and key related roles (employee assistance professional, ergonomist, and occupational health psychologist) are profiled-how many people are in the field, where they work, and what they do. The book reviews in detail the education, training, and education grants available to OSH professionals from public and private sources.

The workplace is where 156 million working adults in the United States spend many waking hours, and it has a profound influence on health and well-being. Although some occupations and work-related activities are more hazardous than others and face higher rates of injuries, illness, disease, and fatalities, workers in all occupations face some form of work-related safety and health concerns. Understanding those risks to prevent injury, illness, or even fatal incidents is an important function of society. Occupational safety and health (OSH) surveillance provides the data and analyses needed to understand the relationships between work and injuries and illnesses in order to improve worker safety and health and prevent work-related injuries and illnesses. Information about the circumstances in which workers are injured or made ill on the job and how these patterns change over time is essential to develop effective prevention programs and target future research. The nation needs a robust OSH surveillance system to provide this critical information for informing policy development, guiding educational and regulatory activities, developing safer technologies, and enabling research and prevention strategies that serves and protects all workers. A Smarter National Surveillance System for

Read Online Occupational Medical Examinations And Surveillance Manual

Occupational Safety and Health in the 21st Century provides a comprehensive assessment of the state of OSH surveillance. This report is intended to be useful to federal and state agencies that have an interest in occupational safety and health, but may also be of interest broadly to employers, labor unions and other worker advocacy organizations, the workers' compensation insurance industry, as well as state epidemiologists, academic researchers, and the broader public health community. The recommendations address the strengths and weaknesses of the envisioned system relative to the status quo and both short- and long-term actions and strategies needed to bring about a progressive evolution of the current system.

Up-to-the-minute, thorough, clinical coverage of common and important occupational and environmental diseases, injuries, and exposures Complete, yet concise, this clinically focused guide offers the definitive overview of common occupational and environmental illnesses, covering their diagnosis and treatment-plus preventive and remedial measures in the workplace and community. With its practical format and emphasis on fundamental topics, CURRENT Occupational and Environmental Medicine is just as essential for students and residents as it is for practicing physicians. You can count on the new fourth edition to deliver the bottom-line answers you need to stay on track in this complex, fast-breaking field. Features: The latest OSHA/NIOSH guidelines for occupational exposure standards Detailed diagnostic checklist for major diseases, injuries, and exposure that help expedite diagnosis and treatment The most clinically relevant perspectives on disability prevention-required reading for the occupational physician Skill-building insights on the importance of ergonomics in the workplace A step-by-step review of how to effectively manage an occupational health and safety program Details on substance abuse and employee assistance programs, health risk analysis, and the legal aspects of occupational and environmental medicine Preventive approaches to terrorist attacks on industry Information-packed primer on epidemiology and biostatistics for the occupational and environmental health specialist Up-to-date references with PMID numbers and peer-reviewed websites

Routine health surveillance, and specifically routine occupational health surveillance in the form of a medical examination, is commonplace, and for many workers is mandatory. Perpetuation of workplace policies that mandate testing such as 'the annual medical' is influenced by a variety of 'stakeholder' agendas. However, evidence of the utility of such testing is lacking. The primary aim of this research was to find evidence to clarify whether widely accepted basic components of the current occupational diver health surveillance programme are 'fit for purpose' and actually enable an appropriate determination of fitness to work. The working hypothesis underlying the studies that comprise this thesis was that there is no evidence to support many of the current mandatory requirements of occupational health surveillance or fitness-to-work determination. A secondary aim was to propose a justifiable and logical health surveillance system for this particular group of workers, professional divers, with possible broader applicability to other categories of workers. Using the case of professional divers as an exemplar, the various components of the routine health surveillance and certification process were examined for their contribution to determining fitness to dive. First, the only two mandatory investigations of the physical examination are tests of lung function and hearing. The value of these investigations was assessed using three longitudinal studies seeking evidence of any correlation between professional diving and clinically significant deterioration in either lung function or hearing. Second, a postal survey was conducted to determine whether the doctors who perform dive medical examinations were able to accurately determine fitness to dive based on vital health information. Third, diver satisfaction with the current certification system was determined using an internet-based survey of registered divers over a 12-month period. Fourth, a qualitative study examined diver interpretations and the

Read Online Occupational Medical Examinations And Surveillance Manual

value of the individual component questions in the current annual health questionnaire. Fifth, the utility of the current surveillance system was examined using two audits spanning different 5-year intervals. These audits involved analysis of divers' health records to determine whether the vital information leading to diver disqualification came from the annual health questionnaire or from the medical examination. Finally, an audit of ex-divers was conducted to determine whether health-related issues were a significant factor in the high rate of attrition of professional divers. The results demonstrated that neither lung function nor hearing was significantly affected by long-term professional diving activity. The doctors who conduct medical assessments of divers were found to perform little better than chance in determining fitness to dive. Most divers were satisfied with the current health certification/surveillance system. Dissatisfaction was mainly related to cost and a limited understanding of the reasons for the various facets of the system. All questions comprising the annual health questionnaire were correctly interpreted by divers, although some questions were considered of low value by experts. Audits of the current system concluded that routine physical examination or investigations did not add significantly to the value of the health questionnaire in uncovering those conditions incompatible with, or requiring modification of, ongoing professional diving. Finally, health-related factors did not appear to be a significant determinant of diver attrition, strongly validating the modifications thus far to the health surveillance system. The over-all conclusion to be drawn from this body of research is that routine medical examinations of professional divers are unreliable and unnecessary. A modified surveillance programme, centred on a health questionnaire, has been proposed for this specialised group of workers, with the aim of providing considerable savings of time and money, but no increase in health risk. Other groups of workers are likely to be similarly affected by health surveillance protocols in need of revision for lack of a reliable supporting evidence base.

Completely revised and meticulously updated throughout, this New Edition will aid you in the detection, diagnosis, and treatment of the full spectrum of problems caused by occupational or environmental factors, including physical, chemical, and biologic agents.

A comprehensive guide to the establishment of screening and surveillance programmes as a strategy for protecting the health of workers exposed to respirable crystalline silica containing dust, coalmine dust, and asbestos dust. Addressed to health planners as well as specialists in occupational health, the book covers both the general principles of effective screening and surveillance and the specific approaches, methodologies, tests, and examinations useful for detecting diseases induced by exposure to mineral dust. Recommended approaches and practices reflect the consensus reached by an international group of experts. Background information is provided in the opening chapters, which explain differences in the aims and methods of screening and surveillance programmes, offer advice on the selection of appropriate medical tests, and discuss essential programme components. Against this background, the most extensive part offers detailed guidance concerning which diseases should be monitored and which tests should be performed. All the major diseases associated with mineral dust exposure are reviewed, emphasizing knowledge about causes, pathological characteristics, manifestations, latency period, the advantages of early diagnosis, and the effectiveness of available interventions. On the basis of this review target diseases for screening and surveillance are identified. The next chapter discusses the uses and limitations of each test commonly used to detect diseases related to mineral dust exposure. Tests are discussed in the categories of conventional chest radiography, additional imaging techniques, measures of lung function, and questionnaires. The final chapter sets out recommendations for the periodic screening and health surveillance of workers.

Read Online Occupational Medical Examinations And Surveillance Manual

The two-volume *Emergency Medical Services: Clinical Practice and Systems Oversight* delivers a thorough foundation upon which to succeed as an EMS medical director and prepare for the NAEMSP National EMS Medical Directors Course and Practicum. Focusing on EMS in the 'real world', the book offers specific management tools that will be useful in the reader's own local EMS system and provides contextual understanding of how EMS functions within the broader emergency care system at a state, local, and national level. The two volumes offer the core knowledge trainees will need to successfully complete their training and begin their career as EMS physicians, regardless of the EMS systems in use in their areas. A companion website rounds out the book's offerings with audio and video clips of EMS best practice in action. Readers will also benefit from the inclusion of: A thorough introduction to the history of EMS An exploration of EMS airway management, including procedures and challenges, as well as how to manage ventilation, oxygenation, and breathing in patients, including cases of respiratory distress Practical discussions of medical problems, including the challenges posed by the undifferentiated patient, altered mental status, cardiac arrest and dysrhythmias, seizures, stroke, and allergic reactions An examination of EMS systems, structure, and leadership
