Ogata's Modern Control Engineering, 5/e, offers the comprehensive coverage of continuous-time control systems that all senior students must have, including frequency response approach, root-locus approach, and state-space approach to analysis and design of control systems. The text provides a gradual development of control theory, shows how to solve all computational problems with MATLAB, and avoids highly mathematical arguments.

Modern Control Engineering Ogata 2nd Edition

NEW - Chapter 10 first discusses PID control in general and then presents two-degrees-of-freedom control systems—Presents a computational (MATLAB) method to determine system parameters so the system will have desired transient characteristics. NEW - Improved chapter on the design of control systems in state space (Chapter 12)—Treats pole placement and observer design.
