The role secondary cities play in the global space economy and national urban hierarchies is increasingly receiving attention from scholars and international agencies, most notably the Cities Alliance. Secondary Cities and Development considers the role of secondary cities through the lens of South Africa, a middle-income country with characteristics of both the developed and developing worlds. This book brings together a broad overview of international literature on secondary cities in South Africa and mirrors them against global experience. Chapters emphasize the importance of secondary cities as regional services areas, their potential roles in rural development, the vulnerabilities to which they are prone and their significant potential. By means of review, six South African case studies, and an assessment of contemporary policy approaches towards these cities, this unique volume provides insight into a spectrum of globally significant challenges. This book would be of interest to academics and policy makers working in urban studies or regional development.

Inclusive education presupposes an all-inclusive approach where all learners are taught in regular classrooms, regardless of background, disability or social context. While there has been much debate, indications are that inclusive education has been gaining momentum. The book is divided into six coherent sections that address the how of inclusive education both inside and outside of the classroom.

Essay from the year 2016 in the subject Geography / Earth Science - Demographics, Urban Management, Planning, grade: 80%, , course: Planning Design, language: English, abstract: Metropolitising as a deliberate process of creating a metropolitan space from a nonmetropolitan city, town or even peri-urban space is often viewed as politically driven. In the global south, metropolitan cities are recipients of significantly larger spending budgets and metropolitan councils can thus wield more political power in the form of monetary power. In South Africa, the development trajectory of cities stems from political ideologies and policies of the political party with an outright majority. In this regard, metropolitising or the mere development of any area within the jurisdiction of a municipality is a political process. Similarly, regionalism is a political process that seeks to wield the most financial power through the amalgamation of different economic powerhouses to form a single economic, spatial and political superpower. In addition to the current politicising of metropolitan city development, historically, apartheid spatial planning was a political system of social engineering based on spatial segregation. The resultant space economy is that of heterogeneity and unequal benefaction from development processes. This spatial differentiation, including the complexities pertaining to economic and institutional systems, further complicates the process of metropolitising in South African cities. In this regard, this essay will critique the efforts of Sedibeng District Municipality in its metropolitising bid through examining its proposed scalar economic rescaling plans for the Vaal River City, while proposing institutional

reforms that could aid its ambitions. The second section of this paper will highlight the limitations that hinder smaller cities' and towns' efforts to becoming metropolitan cities. These limitations stem from an unequal space economy that reproduces itself through ineffective policies and neoliberalisation of urban governance structures and systems.

Emma Leslie's actual name is Emma Dixon and that she lived from 1837-1909 and made her home in Lewisham, Kent, in the south of England. She was a prolific Victorian children's author who wrote over 100 books. Emma Leslie's first book, *The Two Orphans*, was published in 1863, and her books remained in print for years after her death.

A learner-centred curriculum provides space for the learner to be actively involved in knowledge production and learning. Such can only happen if the learner's confidence is boosted by a feeling of control and ability to manage his or her progress towards acquiring a qualification. The twenty-first century teacher must create an environment that not only supports the Four Pillars of Learning but also leads to learners being allowed a voice to ask pertinent questions. The teacher should be able to guide the student to full physical and mental maturity and should help to develop critical thinking, and the students should be encouraged to practice the truth and have self-respect and respect for other people. This can happen if the learner is afforded the opportunity to self-accept. If the learners fail to do so, they are likely to have lack of confidence, which will lead to lack of independence.

First published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

Doing a small-scale research project is a compulsory element of an Education Studies degree. This book will guide and support students through their research, offering practical advice on designing, planning and completing the research, collecting and analysing data and on writing up. It outlines the philosophical approaches underpinning research together with the key concepts and current debates in education research. Chapters cover: - Research paradigms - Ethical approaches to research - Research methods including interviewing, questionnaires, observation and experiments - Research diaries and personal biography - Writing up your research Each chapter includes points for reflection, encouraging students to explore different perceptions on the whole research project. Tasks in each chapter take readers through the process of designing and justifying their own research project. Essential reading for education studies students, it will also be very suitable for those doing masters courses in education, students on initial teacher training programmes and of interest to others, such as classroom assistants, studying education on foundation degrees .

The focus of this publication is on answering the central research question: How can Human Rights be advanced with regard to different kinds of diversities, and in different educational settings? The publication pays special attention to the advancement of human rights in a variety of education-related contexts, in keeping with human rights as a declared national priority for both society at large and the education system. One strategic priority of the Faculty of Education is research based on market requirements and needs. This book strives towards meeting this expectation by directly aiming at building human rights and social justice in the South African society, public schools and higher education institutions. Adjudication in the education context of the constitutional values of dignity, equality and freedom focusses regularly on learners. The book highlights the value of education for full-fledged citizenship by delineating what schooling should entail to inspire learners towards both claiming equal freedoms and rights and taking accountability for the responsibilities attached to citizenship.

"This study ..., conducted by the Criminal Justice Research Division of the San Diego Association of Governments (SANDAG), used the Arrestee Drug Abuse Monitoring (ADAM) program to document methamphetamine use and its consequences among arrestees ... in five cities: Los Angeles, San Diego, and San Jose in California; Phoenix, Arizona, and Portland, Oregon"--P. ix-x.
