We are entering a Space Age, but not the kind President Kennedy originally envisioned. This Space Age is replacing resource wars and redefines planet earth as a "battlespace" in accordance with the military doctrine of "Full-Spectrum Dominance." This book examines how chemtrails and ionispheric heaters like the High-frequency Active Auroral Research Project (HAARP) in Alaska services a full-spectrum dominance. This "Revolution in Military Affairs" needs an atmospheric medium to assure wireless access to the bodies and brains of anyone on Earth—from heat-seeking missiles to a form of mind control. How sinister are these technologies? Are we being prepared for a "global village" lockdown? The recent release of NSA records have reminded Americans that "eyes in the sky" are tracking us as supercomputers record the phone calls, e-mails, internet posts, and even the brain frequencies of millions. Elana M. Freeland's startling book sifts through the confusion surrounding chemtrails-versus-contrails and how extreme weather is being "geo-engineered" to enrich disaster capitalists and intimidate nations. A deconstruction of Bernard J. Eastlund's HAARP patent points to other covert agendas, such as a global Smart Grid infrastructure that enables access to every body and brain on Earth, a "Transhumanist" future that erases lines between human and machine, and Nanobiological hybrids armed with microprocessors that infest and harm human bodies.

As a manufacturer of food and animal feed, seeds and chemical products, Monsanto is relentlessly developing and marketing new technologies. The monopoly it has arguably secured by dubious means bears no relation to its negligence with regard to potential risks. Particularly in light of the devastating consequences that are still causing suffering to people and the environment in many places, the company's self-portrayal as a forward-looking, omnipotent force for good seems cynical. The photographer Mathieu Asselin, who lives in France and Venezuela, has tried his hand at the daunting task of exploring the issues surrounding Monsanto. His investigative photographic study manages to capture the complexity of this topic, creating links between past, present and future and illuminating many different aspects from a variety of perspectives.

While the rest of the media lounge in the warm glow of New Labour's rosy dawn, one journalist in Britain has been a consistently sharp and witty scourge of Tony Blair and his bandwagon babes. Step forward Nick Cohen, denizen of the Observer newspaper's celebrated 'Hold on a Minute' column and a writer who has regularly identified Labour's Third Way as the mid-point between truth and lies, decency and hypocrisy, honesty and corruption. Whether he is tearing into Labour's plans to privatize the prison system and introduce curfews for teenagers, or detailing the government's cozying up to Rupert Murdoch and the hot money traders in the City, Cohen maintains a peerless grasp on the power that flows from fusing invecitive with scrupulous investigation. Even Downing Street Policy Advisor Andrew Adonis was forced to concede that 'no one is better at getting under the Government's skin'. A coruscating barrage of dispatches from his sniper's post, Cruel Britannia celebrates Cohen's lonely stand. It will revivify the disillusioned who anticipated something better from Labour's ascent and fortify those on the left who expected little and received precisely that.

Mother Jones is an award-winning national magazine widely respected for its groundbreaking investigative reporting and coverage of sustainability and environmental issues.

Have you ever asked yourself "What's really going on?" after watching a news story? Maybe you have wondered, "What is the government REALLY doing?" Perhaps you've caught a slip of something an "official" shouldn't have said and wanted to know the other side of the story. Conspiracy Theory 101 explores some of these situations. When the government is silent, theories fill the space in a genuine effort to see the big picture.

Collection of articles on the following subjects: the impact of modern agriculture on the Third World and on the environment, the pesticides problem, the green revolution, seeds and genetic imperialism, the biotechnology threat and "towards ecological agriculture (return to natural farming, natural control of pests, indigenous farming systems)"

The world is in the grips of mass formation—a dangerous, collective type of hypnosis—as we bear witness to loneliness, free-floating anxiety, and fear giving way to censorship, loss of privacy, and surrendered freedoms. It is all spurred by a singular, focused crisis narrative that forbids dissident views and relies on destructive groupthink. Desmet 's work on mass formation theory was brought to the world 's attention on The Joe Rogan Experience and in major alternative news outlets around the globe. Read this book to get beyond the sound bites! Totalitarianism is not a coincidence and does not form in a vacuum. It arises from a collective psychosis that has followed a predictable script throughout history, its formation gaining strength and speed with each generation—from the Jacobins to the Nazis and Stalinists—as technology advances. Governments, mass media, and other mechanized forces use fear, loneliness, and isolation to demoralize populations and exert control, persuading large groups of people to act against their own interests, always with destructive results. In The Psychology of Totalitarianism, world-renowned Professor of Clinical Psychology Mattias Desmet deconstructs the societal conditions that allow this collective psychosis to take hold. By looking at our current situation and identifying the phenomenon of " mass formation " —a type of collective hypnosis—he clearly illustrates how close we are to surrendering to totalitarian regimes. With detailed analyses, examples, and results from years of research, Desmet lays out the steps that lead toward mass formation, including: An overall sense of loneliness and lack of social connections and bonds A lack of meaning—unsatisfying " bullshit jobs " that don 't offer purpose Free-floating anxiety and discontent that arise from loneliness and lack of meaning Manifestation of frustration and aggression from anxiety Emergence of a consistent narrative from government officials, mass media, etc., that exploits and channels frustration and anxiety In addition to clear psychological analysis—and building on Hannah Arendt 's essential work on totalitarianism, The Origins of Totalitarianism—Desmet offers a sharp critique of the cultural " groupthink " that existed prior to the pandemic and advanced during the COVID crisis. He cautions against the dangers of our current societal landscape, media consumption, and reliance on manipulative technologies and then offers simple solutions—both individual and collective—to prevent the willing sacrifice of our freedoms. " We can honor the right to freedom of expression and the right to self-determination without feeling threatened by each other, " Desmet writes. " But there is a point where we must stop losing ourselves in the crowd to experience meaning and connection. That is the point where the winter of totalitarianism gives way to a spring of life. " " Desmet has an . . . important take on everything that 's happening in the world right now. " —Aubrey Marcus, podcast host " [Desmet] is waking a lot of people up to the dangerous place we are now with a brilliant distillation of how we ended up here. " —Robert F. Kennedy, Jr.

The distance between natural foods and what the average American family puts on their dinner table grows wider every year. In Foodture We Trust, the author explores the role that politics and profit play in over-processing all nutritional value out of foods, turning the Creator's abundant, widely varied gift into an indigestible sludge that only marginally resembles the original design. Learn the history of the genetic engineering of food; misappropriation of scientific studies to support the profits of big business; the effort to convince the American public it needs drugs created for diseases that never existed before; and legislation aimed at outlawing natural foods, processes, and remedies for the sake of protecting profits. Gain a scientific understanding of the benefits of natural foods, and learn about evidence that the bureaucracy responsible for protecting the health and nutrition of Americans is dedicated to destroying them instead. For thirty years Heinz Gisel traveled the world innovating cutting-edge medical technology and providing doctors with new instruments to treat illness. As the CEO of medical laser companies, he learned that funding disease fighting technology was difficult, but not for devices used in elective procedures, plastic surgery, aesthetic treatments and vision correction. He observed that many people seeking such treatments would be better served rejuvenating from the cellular level, starting with nutrition. But most people had either forgotten how to balance their diet with lifestyle, or they didn't know to begin with. The author invested years into nutrition research and technology development for analyzing disease susceptibility of presumed healthy people. After opening clinics in various countries, it surfaced that many clients who thought to be healthy were at the brink of a major health challenge, which they could forestall by simple lifestyle modifications and by making conscientious food choices.
