O is the so-called force constant of the spring. The negative sign in the preceding expression indicates that $f(x)$ is a so-called restoring force that always acts to return the displacement, x , to its equilibrium value, $x = 0$ (i.e., if the displacement is positive then the force is negative, and vice versa).

Inertial waves, also

Oscillations, are a type of mechanical wave possible in rotating fluids. Unlike surface gravity waves commonly seen at the beach or in the bathtub, inertial waves flow through the interior of the fluid, not at the surface. Like any other kind of wave, an inertial wave is caused by a restoring force and
